## ***CFS Nutrition Product Quality Assurance***

When it comes to what we put into our body, quality is key. Whether it is organic whole foods or next generation supplementation to power you through your workouts, compromise isn't acceptable.

At CFS Nutrition, we are meticulous in our ingredient selection, purity standards, and potency. Here are a few of the measures CFS Nutrition requires to ensure the consistent quality and effectiveness of our formulas.

CFS Nutrition formulas are based on the most current research and nutritional technology available. CFS Nutrition formulas are regularly reviewed and enhanced to ensure that we are offering the best exercise science has to offer. Production standards are the highest in the industry. All CFS Nutrition formulas meet or exceed certified GMP quality standards and are subject to independent third-party analysis.

This includes manufacturer certifications (GMP, NPA, TGA), using NSF certified manufacturing facilities and independent third-party laboratory analysis. The GMP (Good Manufacturing Practices) registration, NSF (National Sports Federation) International Good Manufacturing Practices and GMP for Sports Athletic Banned Substances Program registrations verifies that CFS Nutrition manufactured products do not have banned substances and have methods, equipment, facilities and controls in place to produce the highest standard in dietary supplementation.

Facilities registered GMP conform to the highest verification process, including ongoing monitoring via two annual facility inspections, to ensure continued compliance with program requirements. NSF International's GMP for Sport program was developed to meet the growing demand of athletes, coaches and those concerned about banned substances in sports. NSF inspects facilities for a range of substances identified by leading sports organizations, such as the World Anti-Doping Agency (WADA). Recreational and professional athletes alike can be confident that they are getting products in compliance with NSF's rigorous index of 165-plus banned substance standards.

We are passionate about enabling athletes of all levels to achieve their highest potential and enjoy year after year of fitness. CFS Nutrition believes in accomplishing this in the cleanest and healthiest way possible. This is accomplished in part by completely excluding fillers, food colorings, additives, preservatives and any inactive ingredients from formulas. We continually stay on the leading-edge of performance nutrition to provide innovative, dynamic and ever evolving formulas. We push our bodies to the limit just like you do. So, like you we only want the healthiest, most efficient fuel for our bodies.

CFS Nutrition is fully committed to delivering products that are clean, facilitate quicker recovery and promote strength gains.

## ***Quantity and Quality of Nutrients are Meaningful***

All CFS Nutrition products are formulated with an eye for performance. The quantity of each ingredient in the formulas and the specific ingredients they are paired with are all on purpose and there to serve a performance purpose. Our product development team analyzes the latest studies and research to support CFS Nutrition formulations. We use no more, and no less, than the optimal quantity needed to achieve the best possible results.

All CFS Nutrition products are pharmaceutical grade, as we are not willing to sacrifice overall health for a momentary gain on the athletic field. This means that nutrient selection is aimed at maximizing stability, absorption, and metabolic potential of individual nutrients or combinations of nutrients. Ingredients are selected in their most biologically active form.

### ***Specifically, we guarantee that every CFS Nutrition nutritional supplement:***

- A Contains only qualified, superior raw materials
- A Meets required specifications for quality and purity
- A Is evaluated and monitored for potential contaminants such as heavy metals, pesticides, and microbiological organisms
- A Is analyzed to confirm the quantity of all dietary ingredients, thereby ensuring the consistency and accuracy of our label claims
- A Is manufactured at FDA inspected facilities with stringent internal quality control procedures and documentation systems
- A Is completely free of genetically modified organisms (GMO)

All that to say we hope that through the use of CFS Nutrition products, you find yourself hitting more personal records and maintaining a superior level of fitness!
